

## **Special NOTE to Chiropractors & Health Professionals prescribing Vioxx, Celebrex, or Bextra**

Xanthones are proven\* to provide *natural relief* via direct inhibition of the COX II enzymes.

In general (*especially in Chiropractic medicine*), most musculo-skeletal conditions are a result of one or two types of injuries -- either a traumatic condition or a repetitive condition such as carpal tunnel...

**But all musculo-skeletal conditions have one thing in common --  
*inflammation*.**

The inflammatory process comes at a time when tissues are going through the natural process of disrepair. Cells have been damaged, and the end result of that damage is the production of hormone-like molecules called **prostaglandins**, which cause **pain and inflammation**.

**The intermediate of this process is an enzyme called Cox II.** The Cox II enzyme is what actually starts the *inflammation, swelling and pain*.

***Good News... we now have XANTHONES!***

In Chiropractic, the **NUMBER-ONE** course of action is the restoration of joint and nerve stability by the use of manipulation.

While the reduction of interim and chronic pain and inflammation can contribute to successful treatment, ***this must be accomplished without harm or stress to the liver or other body systems.***

**Xanthones are naturally occurring biochemically active agents found in high concentration in the mangosteen fruit.**

**These Xanthones have been INDEPENDENTLY researched for decades** with direct\* evidence of their profound and diverse health giving properties.

\*Over 40 Xanthones have been identified in the fruit and pericarp of the mangosteen!
